

FERRIERA VALSABBIA awarded AIC for a second Robotic Tagging Island at Rebar Rolling Mill (Odolo, BS).

FERRIERA VALSABBIA awarded AIC for a second Robotic Tagging island for finished bundles at Rebar rolling mill.

The confirmation comes after the first installed robotic tagging island at Ferriera Valsabbia that assures cycle times to work with finished bundles up to 180 tph, with cycle times of 10 seconds to tag bundles; confirming customer satisfaction with the achieved results.

First fully automated robotic tagging island has been inserted by AIC at Ferriera Valsabbia in the existing tracking system (developed and installed already by AIC together with the rolling mill new installation in 2008) that follows material production and automatically print the tags to be applied at bundles of finished products. New installation, second at this production site, will be done at the end of the finishing area conveyor to tag bundles on both end heads, improving material traceability until the delivery to Ferriera Valsabbia final customers.

Robotic island vision system
